CTF CATEGORIES SOLVED

Web Web-security challenges

Forensics Digital-forensics challenges

PROFILE

Entry-level cyber-security candidate focused on authorised web-application and network security testing. Builds practical skills through secure software projects, legal labs, and structured vulnerability assessments, with a strong commitment to scope control, responsible disclosure, clear evidence, and remediation-focused reporting. Seeking a junior penetration tester, vulnerability-assessment, or cyber-security analyst role.

shrijan-profile.sh

$ cat candidate-profile.txt

Cyber Security and Ethical Hacking student at Softwarica College developing practical foundations in web security, network reconnaissance, Python-based projects, and legal CTF challenges. My work combines secure application development with evidence-led testing and clear documentation, supporting my goal of becoming a Junior Penetration Tester.

EDUCATION

Bachelor's Degree in Cyber Security and Ethical Hacking — Currently pursuing
Softwarica College, Nepal

- Relevant study: ethical hacking, network security, secure systems, digital forensics, programming and risk management.
- Coursework focus: penetration-testing career reflection, tailored CV and professional cover letter.

+2 / Higher Secondary Education — Science — Completed 2023
GPA: 3.40

Secondary Education Examination (SEE) — Completed 2021
GPA: 3.45

SELECTED PROJECTS

Secure Messaging Application — Python
github.com/Shrijan-G/Secure-messaging

- Developed a Python-based secure-messaging project, demonstrating practical interest in secure communication and application development.

NetReconX — Python
Network reconnaissance project

- Built a Python project focused on network reconnaissance and information gathering.

Keylogger Project — C
Controlled learning project

- Created a C-based keylogger project for authorised educational study of keyboard-input capture and endpoint-security risks.

PortSwigger Security Practice — Python
Web-security learning and automation practice

- Practised web-security concepts using PortSwigger learning materials and Python.

Full-Stack E-Commerce Site — Full stack
Web development project

- Developed a full-stack e-commerce application, building experience relevant to web applications and secure-development concepts.
